Here is what I said:

We continue to inspect and monitor the temporary armored cap to ensure that it is preventing migration of hazardous materials from the site. EPA instructed the PRP's to collect samples to demonstrate the temporary cap is protective while a long-term remedy is developed for the site. EPA expects to announce its proposed plan soon.

Hey Jackie,

So the PRPs just released sample results from the the San Jacinto River Waste Pits that indicate that the cap is containing the toxic materials. I was wondering if you wanted to add a comment or two about this?
